- g 1600 once and keep on kneading until the dough is well-combined and smooth.

- g 2000 Make sure that the temperature of the dough is 26-28°C.
- g 30 Let rise for 12-14 hours at 22-24°C with the 70-80% of relative humidity. If the proofer room is devoid of humidifier, cover the dough with a plastic cloth.
- The dough shall quadruple its initial volume.
- ADVICE:
- We suggest to cut out a 250g piece of dough and to put it into a 1L jug to check the pace of the leavening and verify the quadruplication of the volume.
 - We suggest to begin to knead at second speed and then, when at $\frac{3}{4}$ of the kneading time, change to first speed and bring the kneading to end.
 - If the temperature of the first dough is above 28°C, it will be necessary to decrease the leavening time.
 - If you are using a planetary mixer with a "dough hook" attachment or a spiral mixer you will have to reduce the amount of water specified in the first dough (we suggest you to use 2300 gr)

FINAL COMPOSITION

At the end of the rising, leave the panettoni exposed to the air for 20-25 minutes until a light film forms over the surface.

With a small, sharp knife, make two superficial cuts to create a cross, cut the dough under the 4 flaps while throwing and folding them back, then place a pat of butter and return the 4 flaps back to the original position.

Bake at 165-185°C, time depending on the weight (consider about 35-40 minutes for 500g panettoni and 50-55 minutes for 1000g ones), until the temperature of the center reaches 92-95°C.

As soon as they are removed from the oven, the panettoni should be placed onto the specific toothed racks and left to cool upside down for 8-10 hours at least before being wrapped in Moplefan bags.

Glaze with COVERDECOR PISTACCHIO and decorate with CURLS GREEN DOBLA and some pistachios

AMBASSADOR'S TIPS

In order to minimize the risk of mold remember that it is very important to toast the pistachio grain before inserting it into the dough.
